MEETING SUMMARY

HR & Payroll System – Module Review

Date	[15/Oct/2026]
Purpose	Review each module of the system, identify current strengths and gaps, and agree on the next actions required.

Executive Summary

The meeting reviewed nine areas of the system: Attendance, Finance & Payroll, Leave, Employee Management, Birthday, Leave Policy, Audit Log, Inventory, and Expenses. Key outcomes:

- Finance & Payroll requires the most work, with five open issues related to payroll periods, payroll frequency, tax classification, salary types, and salary splitting.
- Leave Policy and Audit Log already exist but need enhancements (probation rules and company-level visibility).
- Several items require further research before development, particularly accounting and tax rules, labor law for leave policies, and industry requirements for Inventory.

1. Attendance

Explanation: The team proposed using a heartbeat method, where the system sends periodic check-in signals to confirm an employee is active. This improves the accuracy and reliability of attendance records.

Strengths	Issues Identified	Action Required
—	—	Implement the heartbeat method for attendance tracking.

2. Finance & Payroll

Explanation: The finance module must produce financial statements and reports on a daily, monthly, and yearly basis. Several payroll limitations were identified that must be resolved before the module can support real-world payroll scenarios.

Strengths	Issues Identified	Action Required
—	Payroll can only be processed for a single month; a payroll period cannot span multiple months.	Review attendance handling against standard accounting principles to support cross-month payroll periods.
—	The system does not allow running payroll twice in one month.	Research whether the maximum frequency should be twice per month or whether more frequent cycles (e.g., weekly) are required.
—	Payroll must be separated into two accounts: taxable and non-taxable.	Conduct in-depth research on accounting and tax requirements before implementation.

Strengths	Issues Identified	Action Required
—	Salary types need to be defined.	Allow the system to manage actual salary, with specific types excluded from standard reports for special cases (e.g., contractors or partners).
—	Salary splitting: a total salary (e.g., CEO at USD 3,000) may need to be divided into separate components (e.g., USD 2,000 + USD 1,000).	Pending – no decision has been made yet.

3. Leave

Explanation: The system currently has no preset leave policies, so each company must configure its own from scratch. Providing ready-made templates will make setup faster and help ensure compliance.

Strengths	Issues Identified	Action Required
—	No preset leave policies are available.	Research leave policies based on labor law, industry standards, and the practices of large companies, small businesses, and family businesses (which typically require more flexibility).

4. Employee Management

Explanation: Two gaps were identified: duplicate data entry when maintaining two versions of employee information, and the lack of an employee history record (e.g., position, salary, and department changes).

Strengths	Issues Identified	Action Required
—	Employee records require two versions of information (internal and official), causing HR to enter the same data repeatedly.	Identify only the fields that differ between versions, so HR does not need to re-enter shared data.
—	Employee history tracking is not available.	Analyze requirements before development.

5. Birthday

This item was discussed; no issues or actions were recorded.

6. Leave Policy

Explanation: The leave policy feature is already in place, but it does not yet support eligibility rules such as restricting leave for employees under probation.

Strengths	Issues Identified	Action Required
Feature already exists.	No rule to restrict leave for employees under probation.	Develop additional functions to support leave eligibility rules.

7. Audit Log

Explanation: The audit log records system activity, but it is currently not visible to company users. Making it available will improve transparency and accountability.

Strengths	Issues Identified	Action Required
Feature already exists.	Audit log is not yet visible to companies.	Add company-level access to the audit log (planned for an upcoming release).

8. Inventory

Explanation: Inventory needs differ across industries. Rather than building separate solutions, the goal is a single, flexible module.

- Research the differences between industries to design one inventory module that supports all, or most, industries.

9. Expenses

Explanation: Infrastructure cost planning is needed to ensure the system can scale sustainably.

- Estimate current and future database usage to forecast storage and hosting costs.

10. Action Items

#	Module	Action	Type	Owner / Due
1	Attendance	Implement heartbeat attendance tracking	Development	
2	Payroll	Review attendance against accounting principles for cross-month payroll	Research	
3	Payroll	Determine maximum payroll runs per month	Research	
4	Payroll	Research accounting and tax rules for taxable / non-taxable accounts	Research	
5	Payroll	Define salary types and reporting rules for special cases	Development	
6	Payroll	Decide on salary splitting approach	Decision	

#	Module	Action	Type	Owner / Due
7	Leave	Research leave policies to build preset templates	Research	
8	Employee	Identify differing fields between internal and official records	Analysis	
9	Employee	Analyze employee history tracking requirements	Analysis	
10	Leave Policy	Add probation and eligibility rules	Development	
11	Audit Log	Enable audit log visibility for companies	Development	
12	Inventory	Research industry requirements for a unified module	Research	
13	Expenses	Estimate current and future database usage	Analysis	

Note

Any differences between internal and official employee records, salary reporting, or tax classification should be reviewed with a qualified accountant or tax advisor to ensure compliance with applicable labor and tax regulations.
