Release notes · v1.2.0

What's new in Business OS 1.2.0

One place to set how every attendance status looks, a personal pay page for every staff member, and a way for admins to reset a forgotten password.

Released November 2026 · Screenshots from the demo company "Sovanna Trading Co., Ltd."

IN THIS RELEASE

1. Status codes in one place
2. Leave codes and colours
3. My Pay for every staff member
4. Admins can reset a password
5. Leave columns in the Excel export
6. Smaller improvements

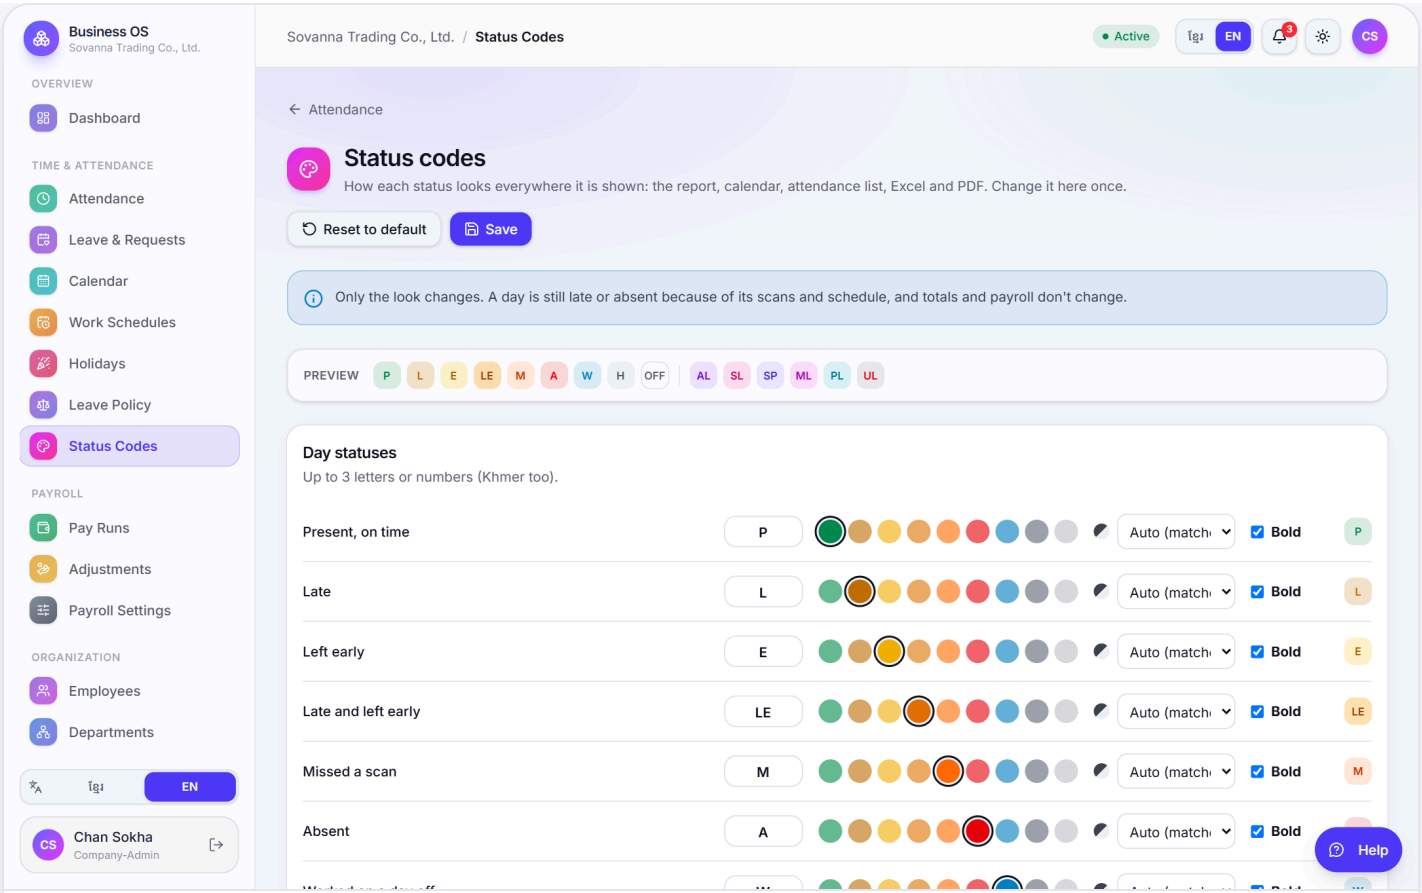

1 Status codes in one place

Admins · HR

Every day status — present, late, left early, missed a scan, absent, holiday, day off and each leave type — now has a short code and a colour that you choose once. The attendance report, the calendar, the attendance list, the Excel file and the PDF all follow it automatically.

How to use it

1. Open **Attendance** → **Status Codes** in the sidebar.
2. For each status, type a code (up to 3 letters or numbers — Khmer works too) and pick a colour.
3. Optionally choose a text colour and whether the code is **bold**. The chip on the right shows the result.
4. Check the **Preview** row at the top, then press **Save**. **Reset to default** brings back the original look.

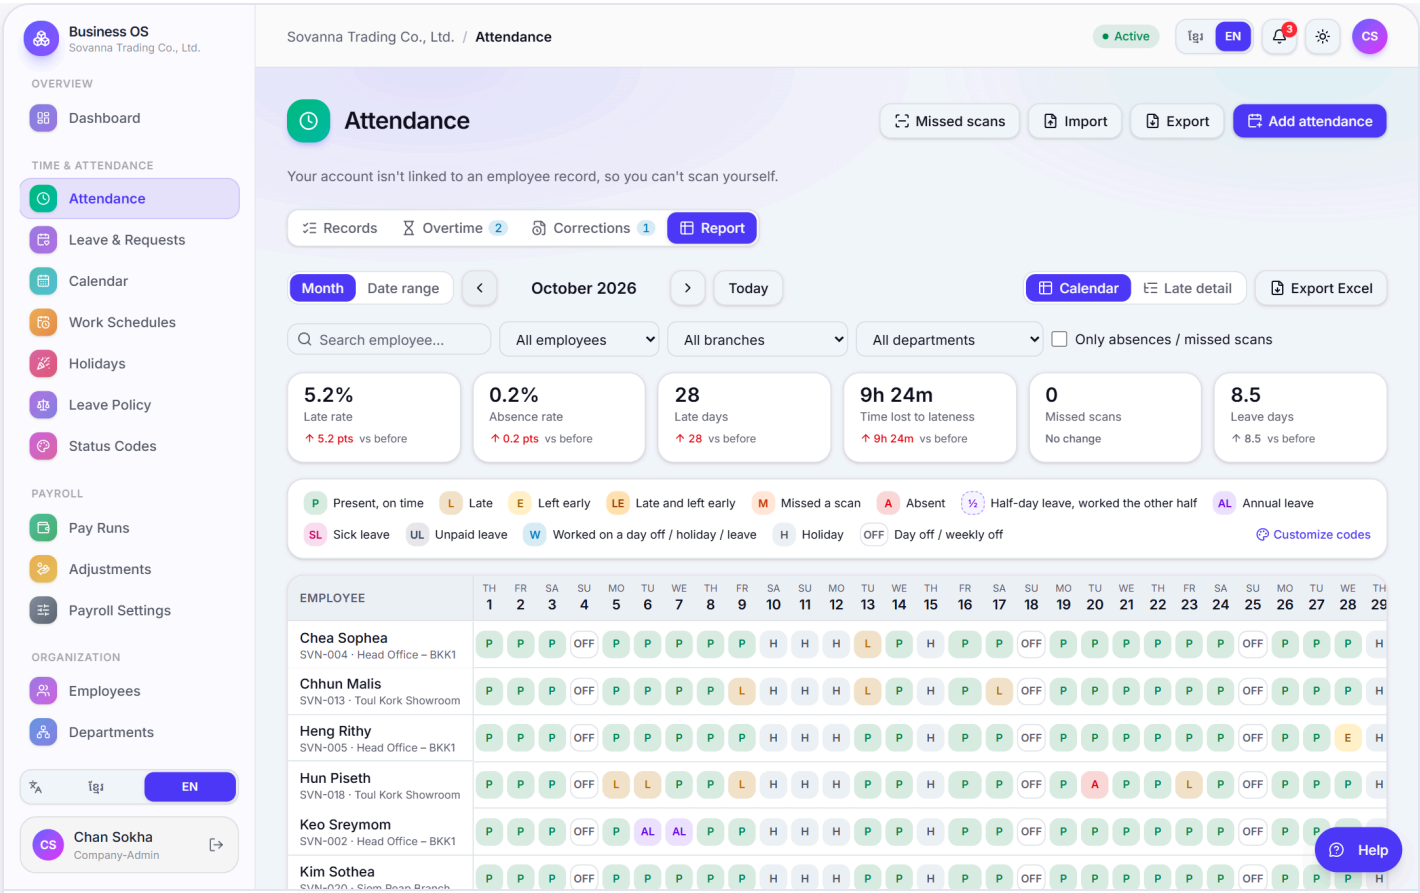

Attendance → Status Codes. Each row sets one status; the preview at the top shows all of them together.

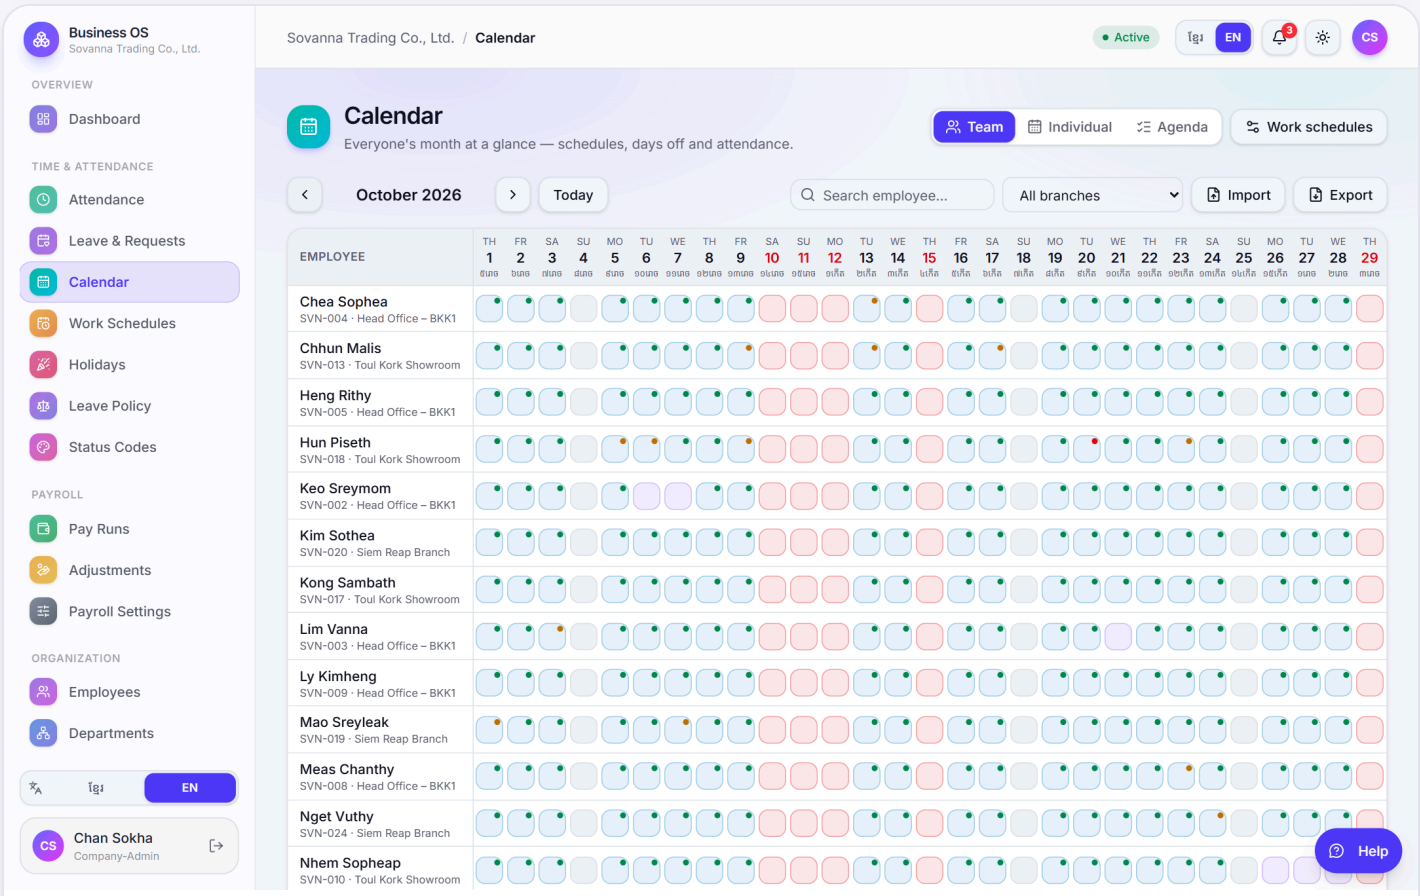

> **Only the look changes.** A day is still late or absent because of its scans and work schedule. Totals and payroll are not affected.

Where you see it

The monthly attendance report uses the same codes and colours, with a legend above the grid and a **Customize codes** link that opens the page above.

Attendance → Report. Each cell shows the day's code in the colour set on the Status Codes page.

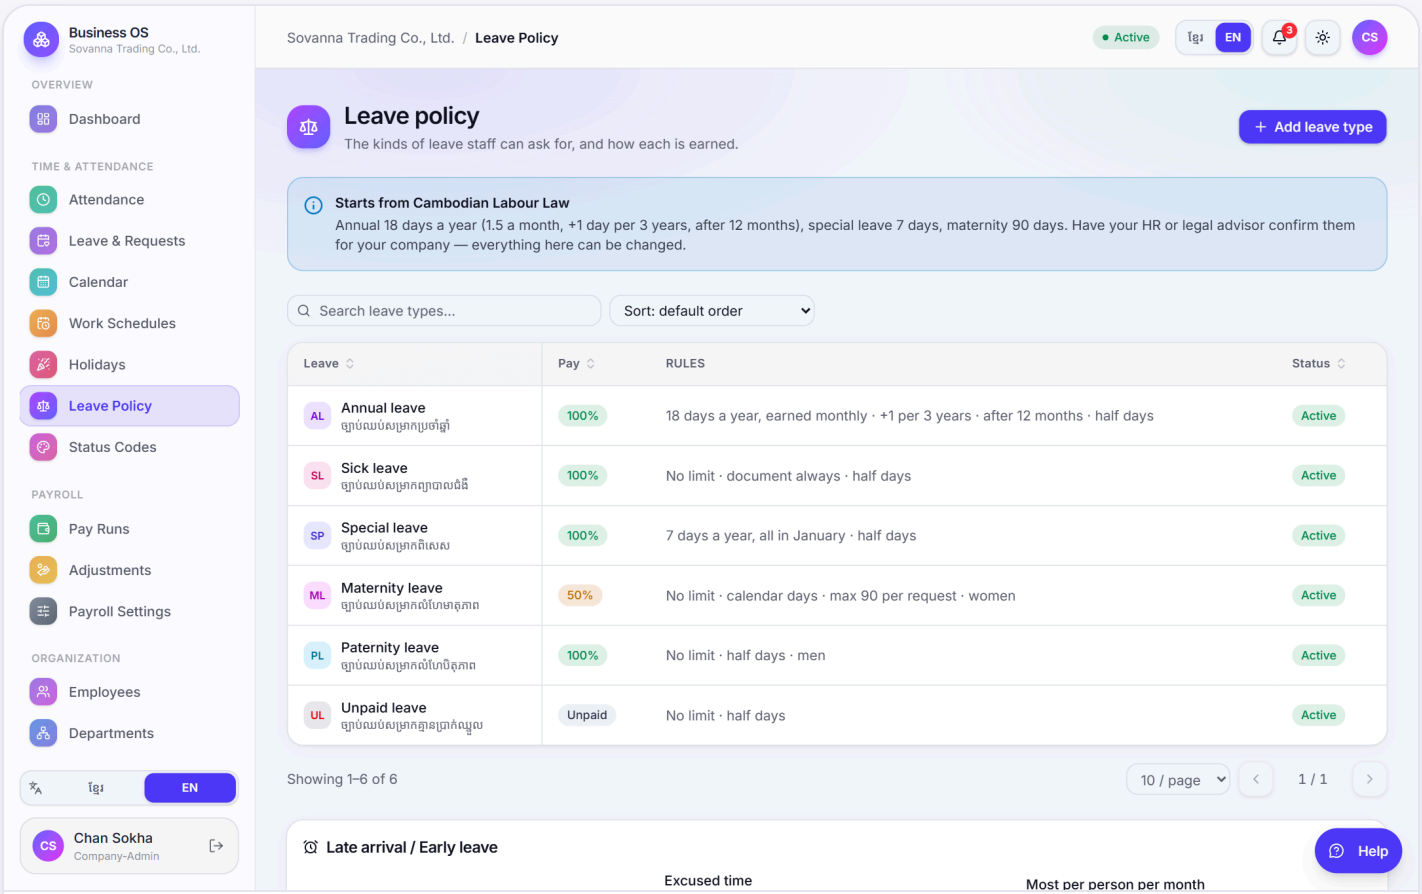

Calendar → Team. Days use the same colours, so the calendar and the report always match.

2 Leave codes and colours

Admins · HR

Each leave type now has its own code — for example **AL** for annual leave, **SL** for sick leave, **UL** for unpaid leave — so a leave day in the report says exactly which leave it was.

- Codes and colours are set on the **Status Codes** page, under the leave types section.
- The **Leave Policy** page shows each type's code chip next to its name.
- A leave code can't reuse a day-status code: "M" can't mean both *missed a scan* and *maternity leave*.

Leave Policy. Every leave type shows its code chip.

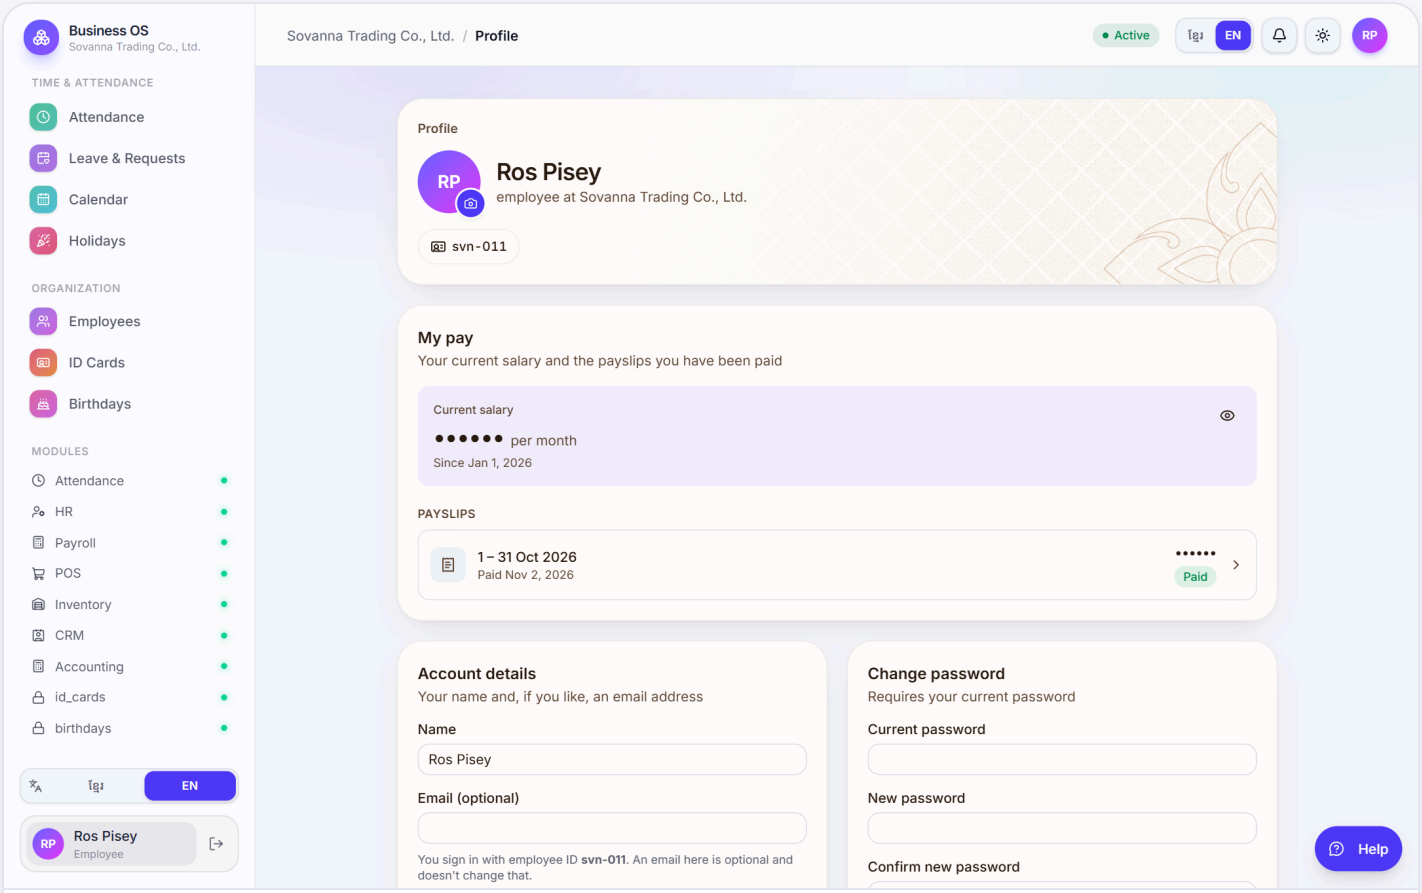

3 My Pay for every staff member

All staff

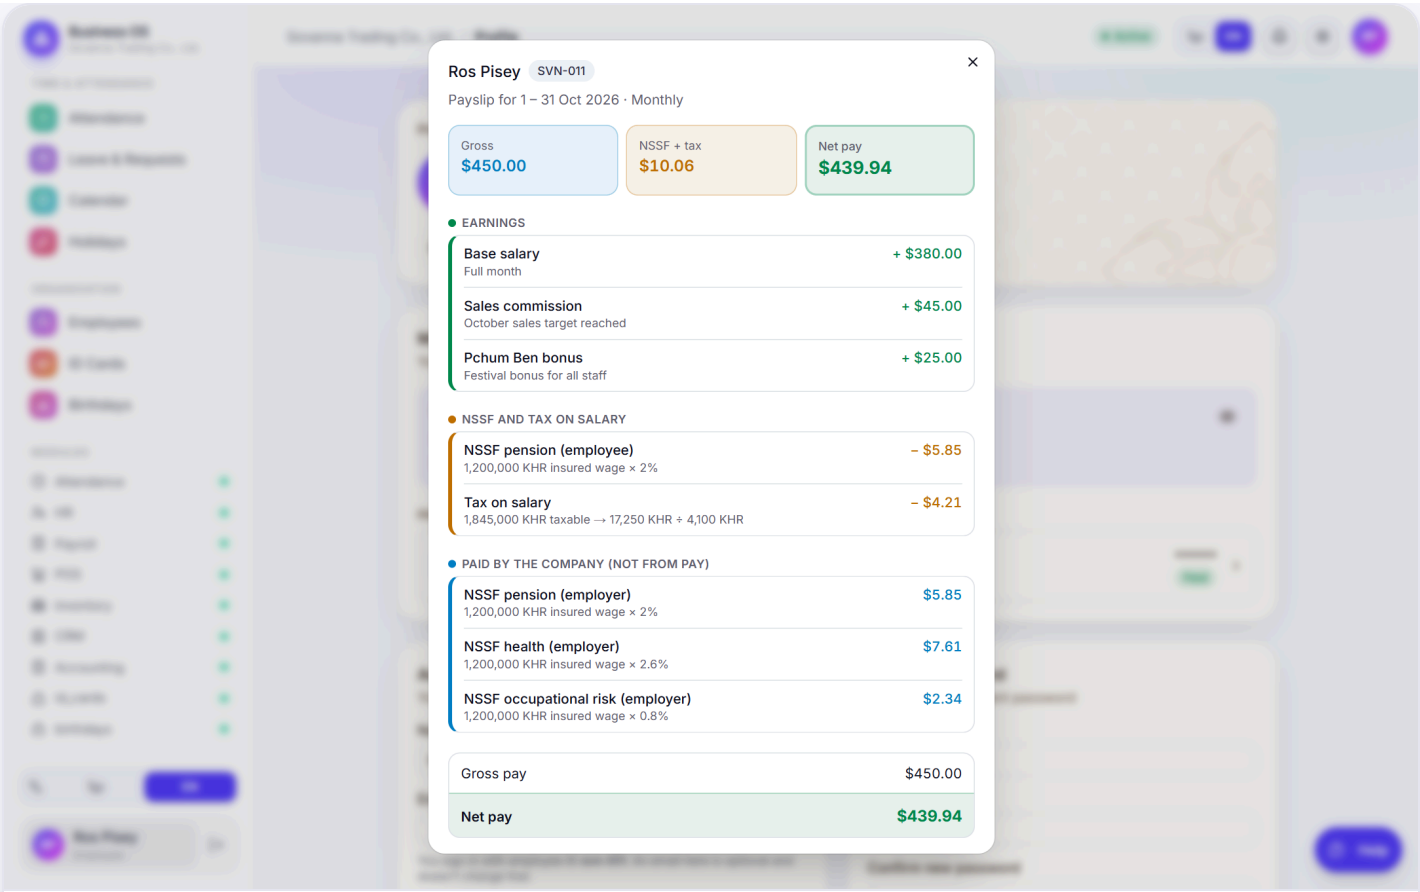

Staff can now see their own salary and payslips without asking HR. It appears on their **Profile** page when the Payroll module is turned on.

How to use it

1. Open **Profile** (click your name at the bottom of the sidebar).
2. Under **My pay**, amounts start hidden. Press the eye button to show them.
3. Click a payslip to see every line: earnings, NSSF and tax, and what the company paid on top.

Profile → My pay. Salary and amounts stay hidden until the eye button is pressed.

An opened payslip: gross, deductions and net pay, with the calculation shown under each line.

🔒 **Private by design.** Everyone sees only their own pay, and only from pay runs that are approved or paid. No permission needs to be given.

4 Admins can reset an employee's password

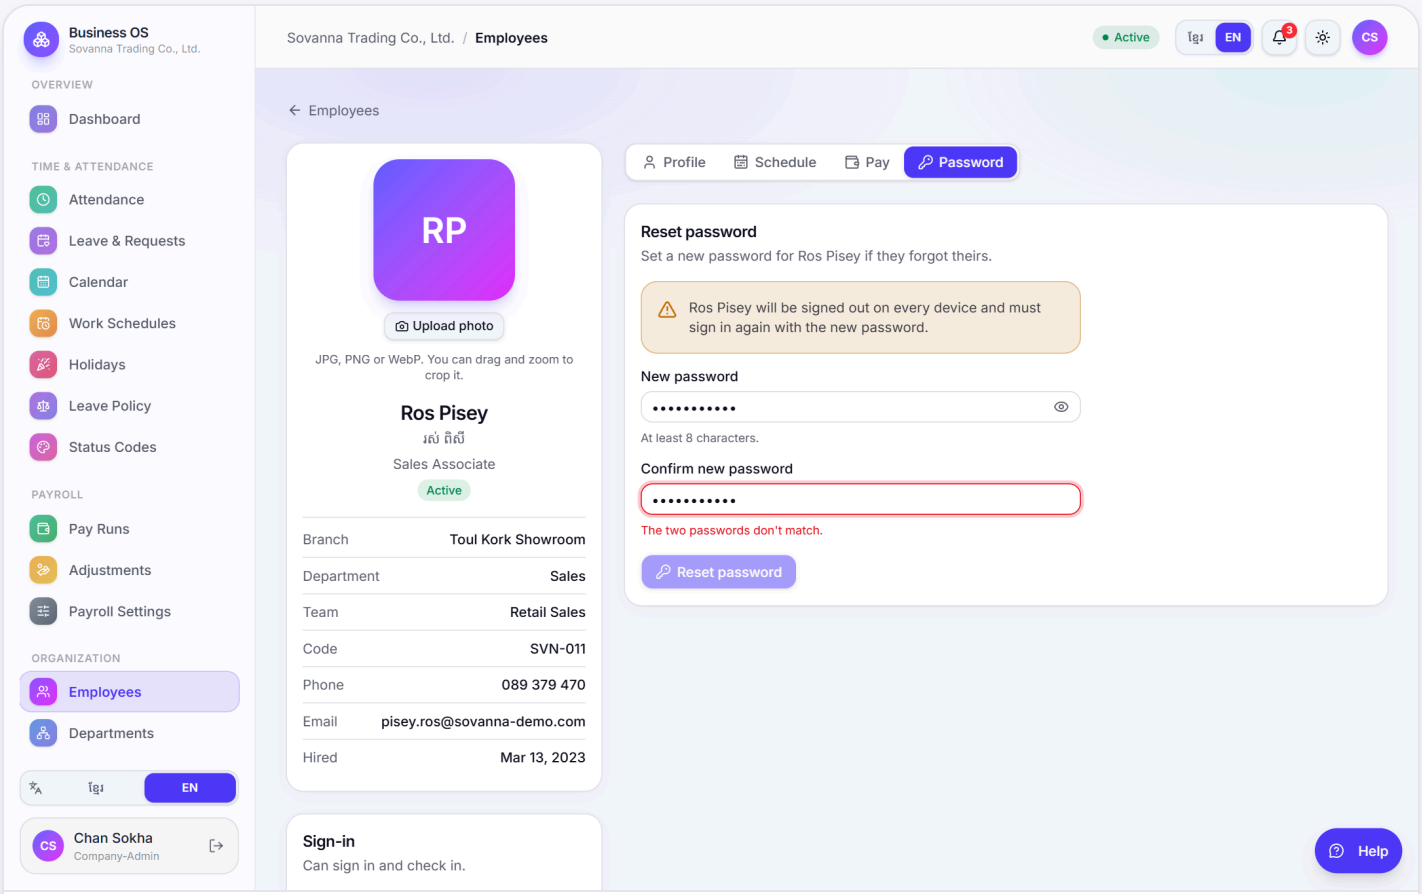

Admins · HR

When an employee forgets their password, an admin can now set a new one from the employee's page. Before this, the only way out was to remove the login and create a new one.

How to use it

1. Open **Employees** and click the employee.
2. Open the **Password** tab.
3. Type the new password (at least 8 characters) and type it again to confirm. The eye button shows what you typed.

4. Press **Reset password**, then give the employee the new password in person or by phone.

Employees → employee → Password. The two fields must match before the button can be pressed.

> ⚠️ **The employee is signed out everywhere.** Their phone and any other device must sign in again with the new password.

Who can do it

SITUATION	ALLOWED?
You have permission to manage employees	Yes
The employee has no login yet	No — use **Create login** first
Your own account	No — change it from **Profile** → **Change password**
Resetting a company admin's password	Only another company admin

Every reset is recorded in the **Audit log** (who did it and when — never the password).

5 Leave columns in the Excel export

Admins · HR · Payroll

The attendance Excel file now has three extra columns for leave days, so payroll can work straight from the file:

- **Leave code** — the leave type's code, e.g. AL or SL.
- **Leave colour** — the colour set for that leave.
- **Leave pay %** — how much of the day is paid. Unpaid leave shows **0**.

Cells in the Excel and PDF files use the same colours as the screen.

6 Smaller improvements

- **Retry on slow loading.** If a page takes too long to load (for example on a weak connection), a **Try again** button appears instead of an endless spinner.
- The attendance day popup, attendance list and dashboard use the new status chips.
- All new screens and messages are available in Khmer and English.
